Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. For the fund's most recent performance data, please see the price and performance section on the fund's web page (www.mxefund.com).

The Fund's Portfolio securities are denominated in Mexican pesos. As a result, the portfolio return in U.S. dollars must increase in market value at a rate in excess of the rate of the decline in the value of the Mexican peso against the U.S. dollar in order to present an excess dollar return.

The NAV accretion that resulted from share repurchases, for the 1, 3, and 5-year period ended October 31, 2018 was 0.06, 0.10 and 0.10 respectively. For the purpose of performance calculation, U.S. Bancorp assumes that MXE's dividends and distributions are reinvested at the closing market price on the dividend ex-date and takes into account the dilution effect resulting from fund's stock dividend. This calculation of MXE's performance figures may differ from other financial sources, such as Bloomberg.

MXE's ratio of expenses to average net assets=1.75% for the fiscal year period ended July 31, 2018.

THE MEXICO EQUITY & INCOME FUND, INC. OCTOBER 2018 FACT SHEET

Fund Objective & Strategy

Profile

The Mexico Equity and Income Fund, Inc. ("the Fund") maintains an investment objective of long-term capital appreciation through investments in the Mexican universe of equities listed on the Mexican Stock Exchange.

Characteristics

The Mexico Equity and Income Fund, Inc. (MXE) incorporated in Maryland, U.S.A. , is registered under the U.S. Investment Company Act of 1940, as amended, as a NYSE closed-end, non diversified management investment company.

Risk Factors

The Fund invests substantially all of its assets in securities of Mexican issuers. All investments involve risk. Principal loss is possible. Investing internationally involves additional risks such as currency fluctuations, market price volatility, social and economic instability, changes in taxation, periods of illiquidity and other factors. All Mexican companies are subject to Mandatory IFRS (International Financial Reporting Standards) accounting since the year 2011. Mexico has experienced currency devaluations, high levels of inflation and interest rates, but currently has a solid macro economic framework. (Please see PAM's most recent Report on the Economy at the Fund's website.)

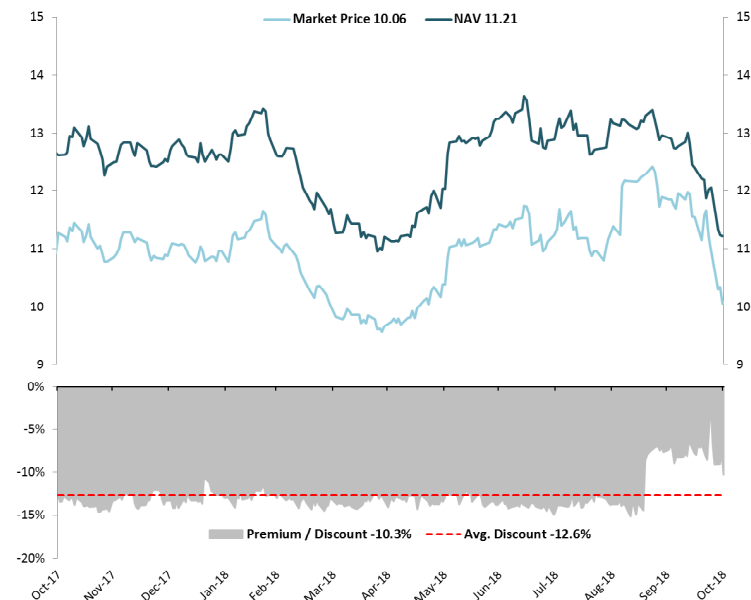

To read about The Mexico Equity and Income Fund, Inc, please access the Annual Report by calling (414) 765-4255 to receive a copy, or access the Annual Report on the Fund's website, "www.mxefund.com", under the section captioned investor reports. Investors should consider the Fund's investment objectives, risks, charges and expenses carefully before investing. An investment in the Fund should not constitute a complete investment program.

Closed-end funds are traded on the secondary market through one of the stock exchanges. The Fund's investment return and principal value will fluctuate so that an investor's shares may be worth more or less than the original cost. Shares of closed end funds may trade above (a premium) or below (a discount) the net asset value (NAV) of the fund's portfolio and there is no assurance that the fund will achieve its investment objective.

Definitions:

-Basis point (BPS) Refers to a common unit of measure for interest rates and other percentages in finance.

- MEXBOL Index: The S&P/BMV IPC seeks to measure the performance of the largest and most liquid stocks listed on the Bolsa Mexicana de Valores. The index is designed to provide a broad, representative, yet easily replicable index covering the Mexican equities market. The constituents are weighted by modified market cap subject to diversification requirements. It is not possible to invest directly in an index.

- Std Dev: The standard deviation is a statistic that measures the dispersion of a dataset relative to its mean and is calculated as the square root of the variance.

- Spread: Measure of the value added by the portfolio or investment manager in excess of a particular benchmark, or index with similar level of risk.
